Guildford, Surrey, UK | +44 07823913050 | manvendras2608@gmail.com | linkedin.com/in/manvendras2608 | github.com/singh-manavv

PROFESSIONAL PROFILE

MSc Data Science graduate (Merit, University of Surrey) with commercial experience delivering KPI monitoring, diagnostic reporting and stakeholder facing dashboards in a data driven gaming business. Works across the full analytical workflow, from SQL and Python based data extraction and validation through to Power BI dashboard delivery and presentation of findings to senior decision makers. Analysis has directly informed pricing, product placement and retention decisions, including a 24% improvement in player retention, supported by a completed UK retail analytics portfolio demonstrating segmentation, margin and channel analysis on 60,000 transactions.

EXPERIENCE HIGHLIGHTS

- Delivered KPI monitoring and diagnostic reporting whose recommendations contributed to a 24% improvement in player retention.
- Built a four page Power BI dashboard on 60,000 UK retail transactions, quantifying £2.07M of revenue held by at risk customers.
- Validated around 20,000 transaction and player activity records monthly across SQL and MongoDB, keeping stakeholder reporting accurate and trusted.
- Automated manual reporting workflows in Python, reducing error risk and releasing analyst time for insight generation.
- Self taught MDX in one day to deliver 12 working KPI measures, the most in the cohort, on a business intelligence project.

TECHNICAL SKILLS

Tools: SQL, Python (Pandas, NumPy, Scikit-learn), Power BI (DAX), Tableau, Looker Studio, Excel (Pivot Tables, Power Query), Google BigQuery, GCP, MongoDB, R, MDX, GitHub, Docker

Data and Reporting: KPI framework design, dashboard development, diagnostic and root cause analysis, customer segmentation, RFM and cohort analysis, revenue and margin analysis, data validation and governance, reporting automation

Business and Stakeholder Skills: Requirements gathering, stakeholder presentation, data driven recommendations, business process documentation, SOP maintenance, cross functional collaboration

PROFESSIONAL EXPERIENCE

Data Analyst | RetroFusion Games LLP

Feb 2024 to Dec 2024

Ahmedabad, India

- Built and maintained a KPI monitoring framework tracking eight core commercial metrics, including GGR, ARPU, player retention and hit frequency, across three channels and multiple regions, giving senior stakeholders trusted daily visibility of business performance.
- Delivered scheduled and ad hoc diagnostic reports to regional and area managers, investigating declines in player activity and identifying underperforming segments, with recommendations on RTP, hit frequency and game placement contributing to a 24% improvement in player retention.
- Analysed pricing mechanics, game placement and return behaviour across customer cohorts to identify patterns in spend, informing commercial and operational strategy adjustments.
- Validated around 20,000 transaction and player activity records monthly across SQL and MongoDB sources, ensuring analytical outputs remained complete, accurate and trusted by decision makers.
- Automated manual data preparation and reporting workflows in Python, improving governance, reducing error risk and freeing analyst time for higher value analysis.
- Gathered requirements from senior stakeholders, defined analytical questions and maintained documentation and SOPs to support consistent, reproducible reporting across the team.

Python Developer | TOPS Technologies

May 2022 to Dec 2023

Ahmedabad, India

- Developed and maintained Python applications and scripts across requirements, build, testing and delivery, establishing the programming foundation later applied to analytical automation.
- Earned the Certified Python Developer credential, backed by NSDC and Skill India, on the strength of this work.

RELEVANT PROJECTS

UK Retail Analytics Portfolio | SQL, Python, Power BI

Independent

github.com/singh-manavv/uk-retail-analytics

- Investigated where revenue, margin and customer value were concentrated across a 60,000 transaction UK retail dataset covering 8,000 customers, 76 products, 20 stores and 11 regions, using SQL for extraction and segmentation and Python for RFM and cohort analysis.
- Delivered a four page Power BI dashboard covering trading performance, customer loyalty, regional breakdown and channel analysis, designed for self service use by commercial decision makers.
- Identified that Electronics generated 54% of revenue at only a 27.7% margin while Beauty and Health carried a 51.4% margin, and that 840 of 1,783 Champion customers sat on the lowest loyalty tier, findings that would support margin mix and loyalty programme decisions.
- Quantified £2.07M of historical revenue held by 3,523 At Risk and Lost customers, providing a clear, prioritised target for retention activity.

Cloud Data Warehouse and BI Reporting | GCP, BigQuery, Looker Studio

University of Surrey

- Built an end to end cloud data warehouse in BigQuery to answer commercial performance questions on a multi category e-commerce dataset, delivering a live Looker Studio dashboard tracking year on year revenue and fastest growing categories.
- Surfaced a \$127,000 revenue insight through BigQuery ML analysis and deployed a Flask application on Cloud Run so stakeholders could run their own queries directly.

Business Intelligence Solution | OLAP, MDX, KPI Dashboards

University of Surrey

- Designed a multidimensional reporting layer with an OLAP cube and 12 MDX calculated measures tracking fulfilment, cancellation and revenue KPIs, self teaching MDX in one day and delivering the most working measures in the cohort.

EDUCATION

MSc Data Science (Merit) | University of Surrey

Sept 2024 to Nov 2025

Guildford, Surrey

- Relevant modules: Database Systems, Practical Business Analytics, Cloud Computing, Machine Learning and Data Mining, Data Science Principles and Practices, Natural Language Processing.

Bachelor of Computer Applications (Merit) | LCCA Lokmanya College of Computer Applications

May 2019 to Apr 2022

Ahmedabad, India

- Core modules: Python Programming, Database Management, Data Structures and Algorithms, Web Application Development.

CERTIFICATIONS

- Lloyds Banking Group Data Science Job Simulation, Forage, May 2026. Customer churn prediction using Random Forest with a ROC AUC of 0.82, including data preprocessing and feature importance analysis in Python.
- Deloitte Australia Data Analytics and Forensic Technology Job Simulation, Forage, May 2026. Tableau dashboards, Excel data classification and forensic reporting.
- Certified Python Developer, TOPS Technologies, backed by NSDC and Skill India, May 2024.
